

Moments of $|\log \sigma_{t+\Delta} - \log \sigma_t|^q$

$m(q, \Delta)$ (log scale)

• $q = 0.5$ • $q = 1$ • $q = 2$ • $q = 3$

Simulated rough log volatility, $H = 0.12$

• slopes ζ_q — $\zeta_q = \hat{H}q, \hat{H} = 0.112$
